# Everything in Valueflows is connected.

VF has 3 levels...and they are connected like so

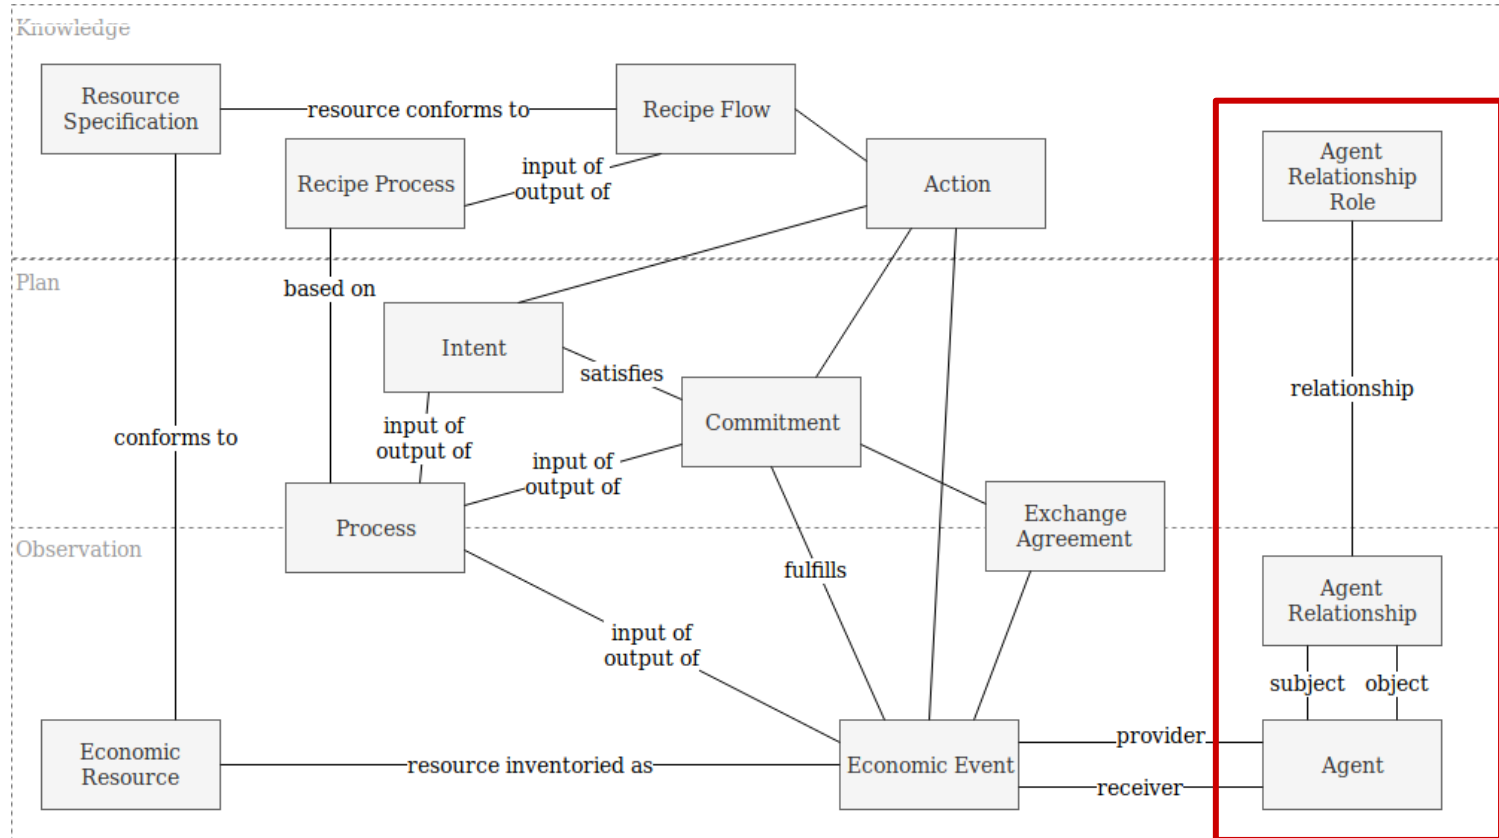

The Plan level depends on Recipes and prepares for Actuals.
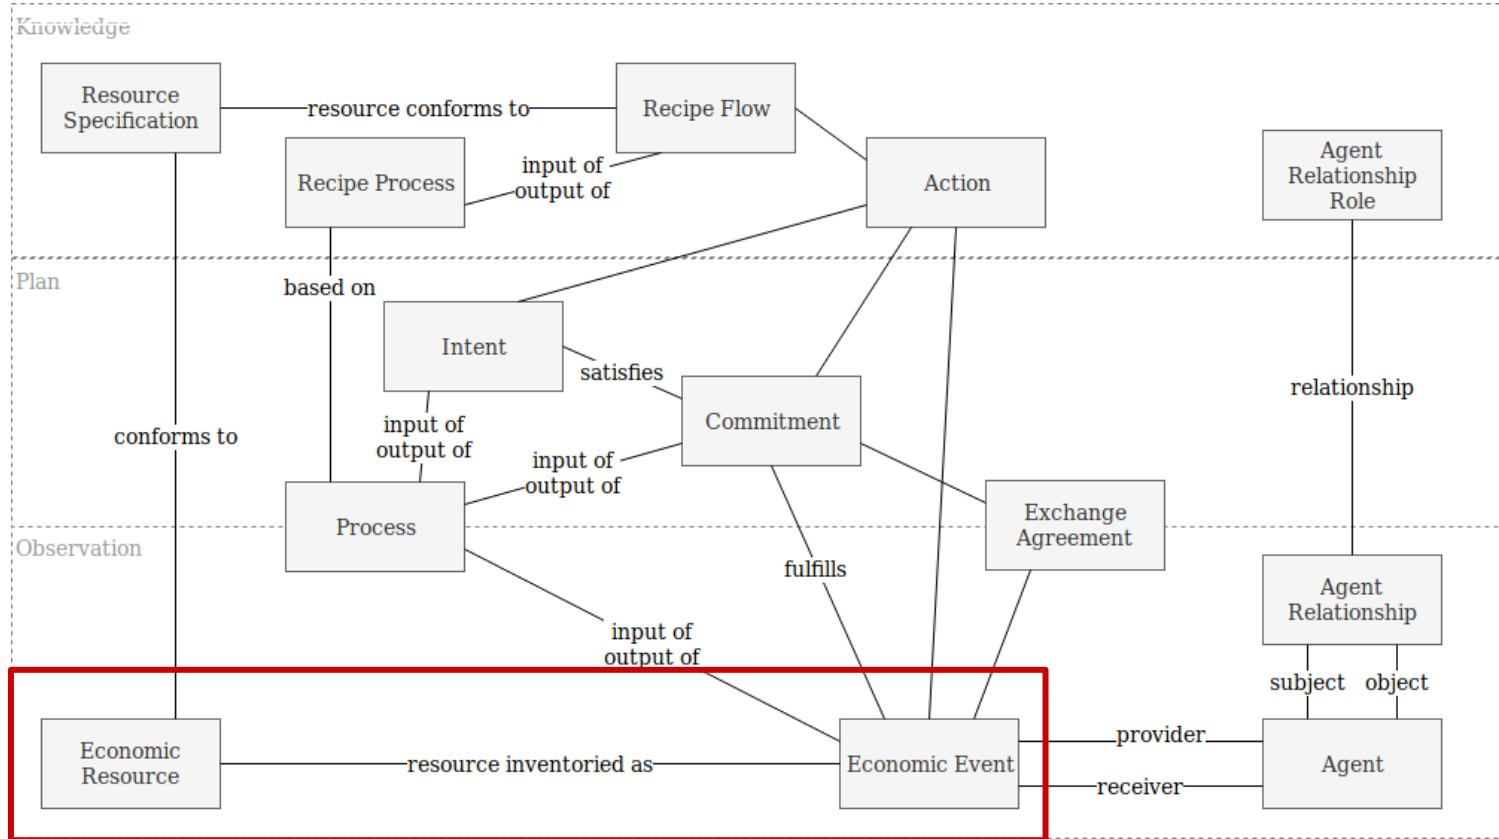

In VF, you are an Economic Agent.

# You may be connected to other Agents by means of Agent Relationships.

You are connected to all of the Economic Events you have participated in. They may be many types of Events: Work, Production, Consumption, etc.
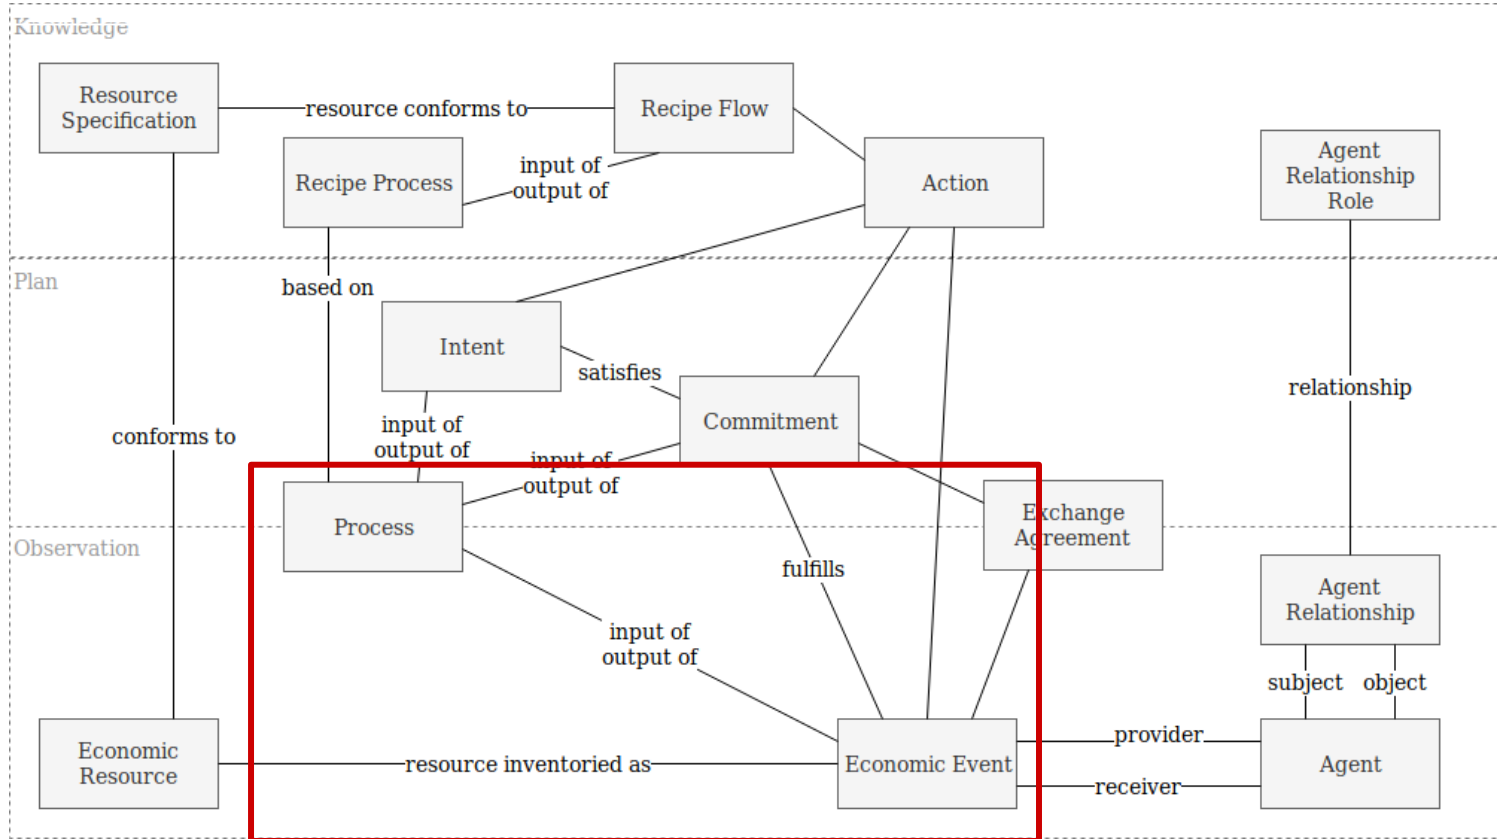

Economic Events change Economic Resources.
## They may create, consume, use, cite, provide, or transfer Resources.

# You may own or have custody or have some other responsibility for Economic Resources

Economic Events may be connected to Processes.
# They may be inputs to, or outputs from, Processes.

If the same Resource is an output from one Process and then an input to another Process, then those Processes are connected by a resource flow.
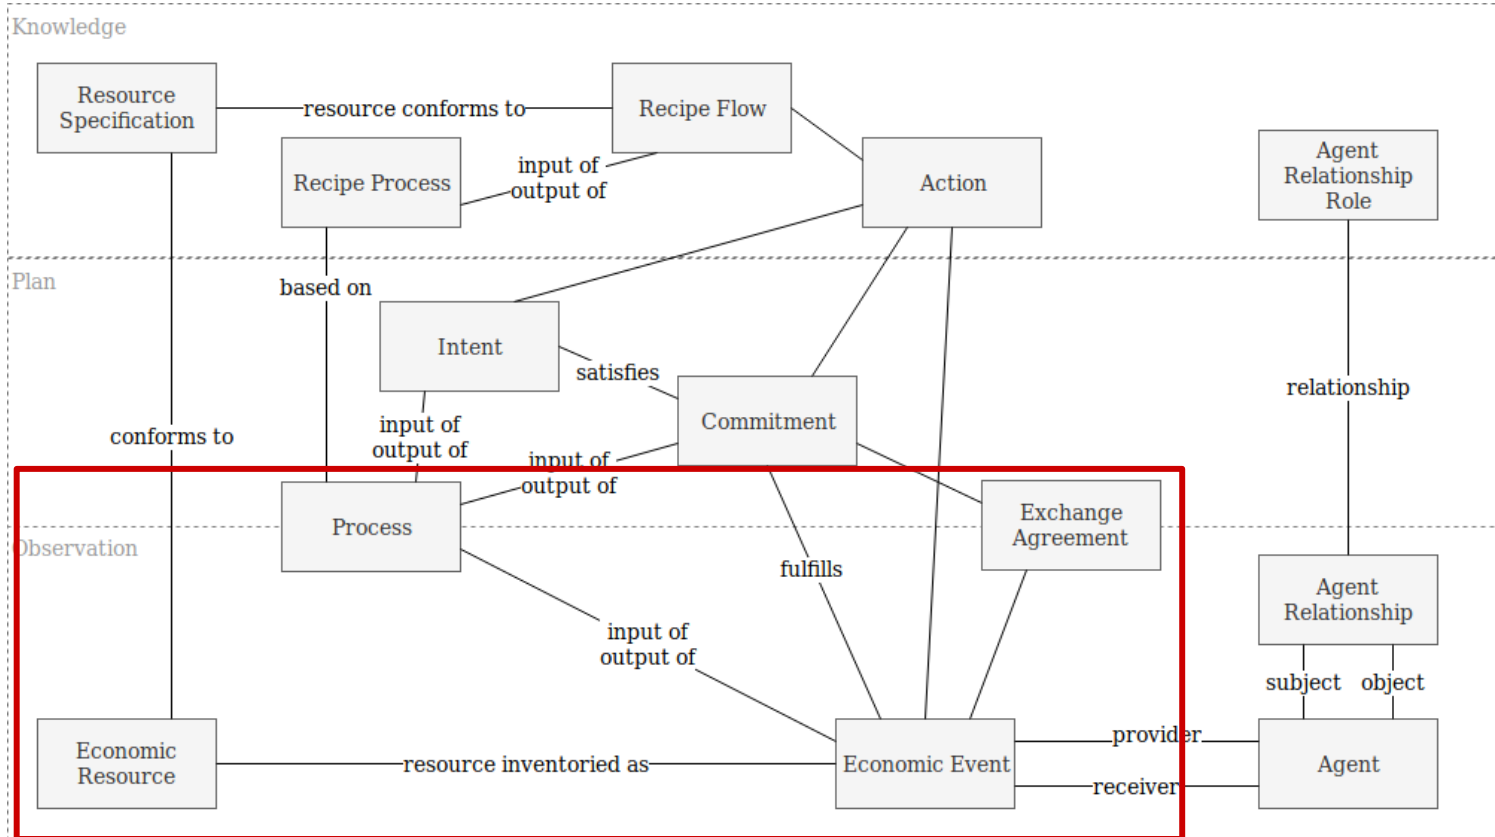

Economic Events may also Transfer Resources from one Agent to another, which can be part of Exchanges.
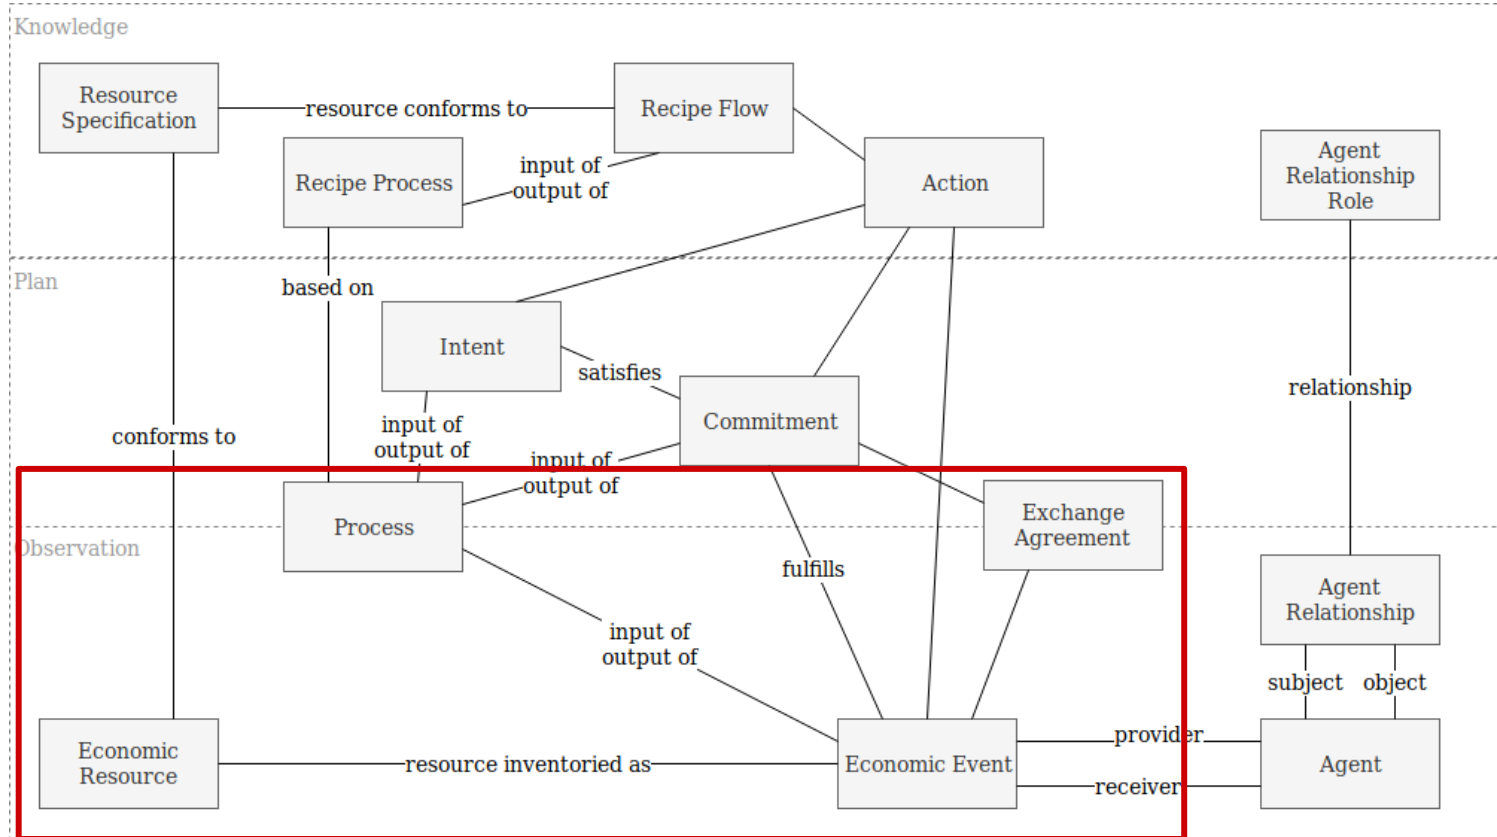

If the same Resource is transferred in an Exchange and then becomes an input to a Process, then the Exchange and the Process are connected.
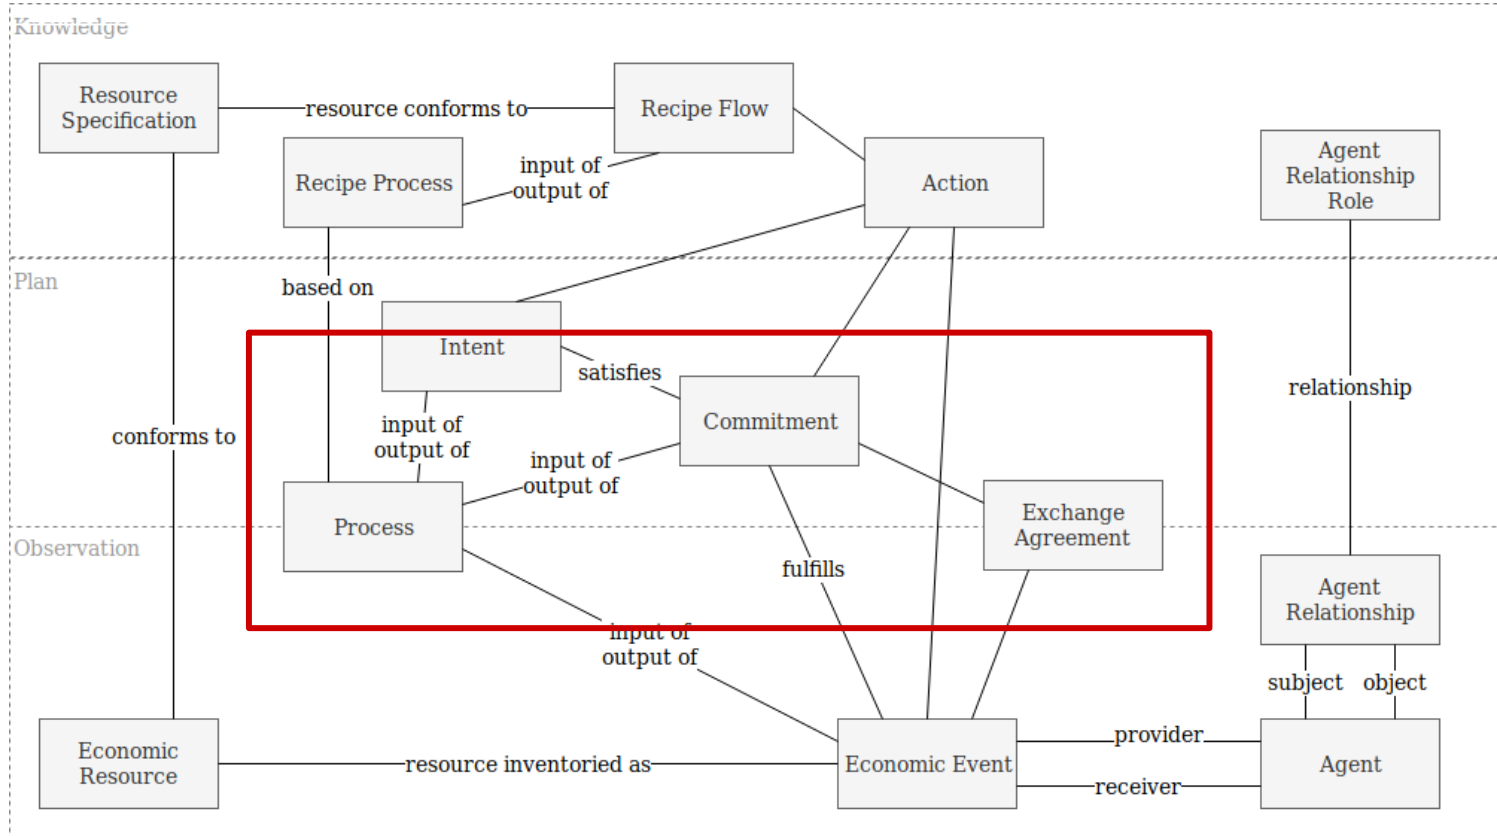

Likewise if the same Resource is an output from a Process and then transferred in an Exchange.
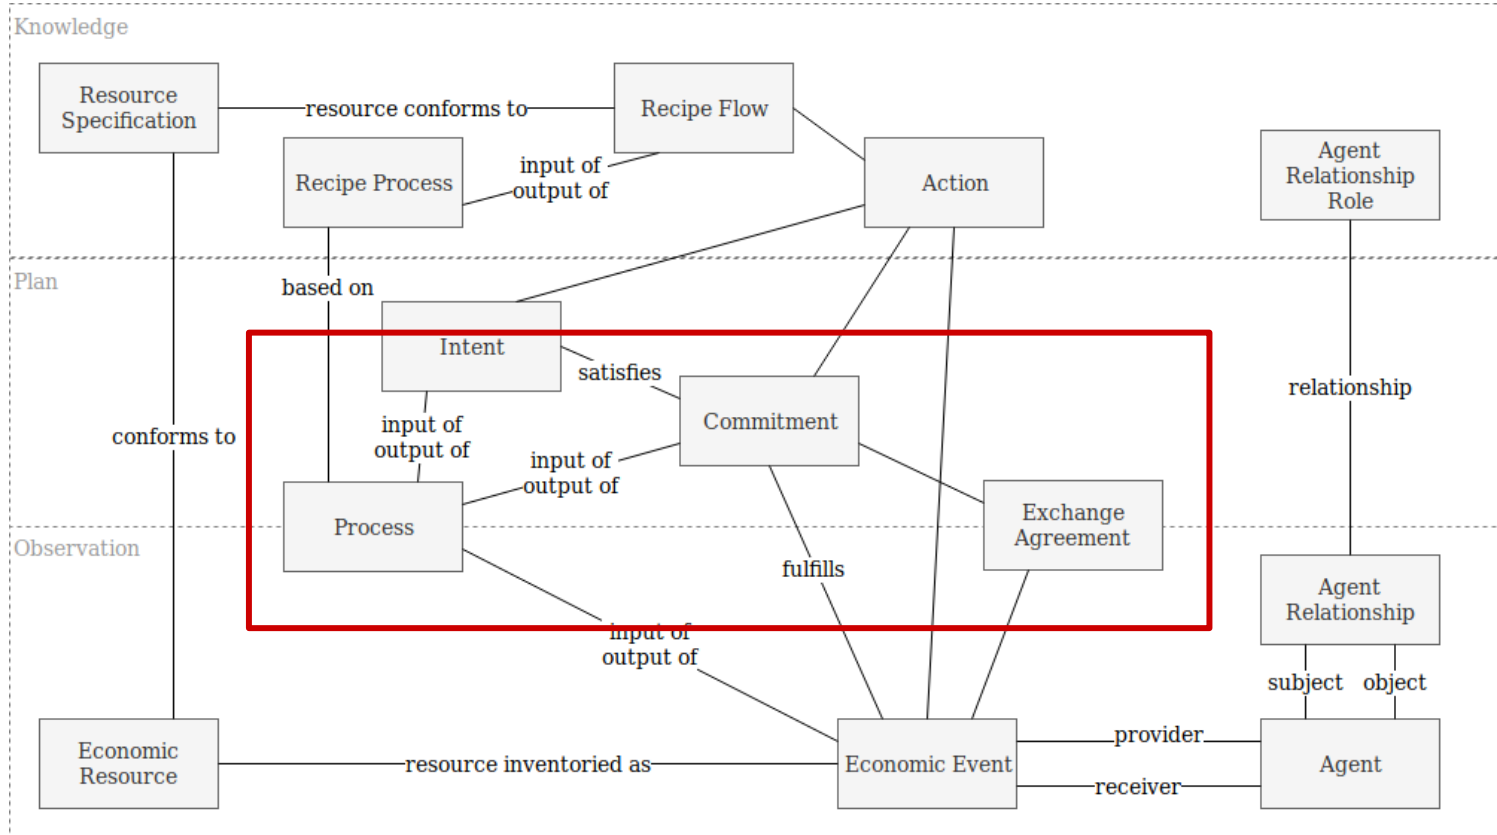

And likewise if the same Resource is transferred in one Exchange and then transferred again in another.
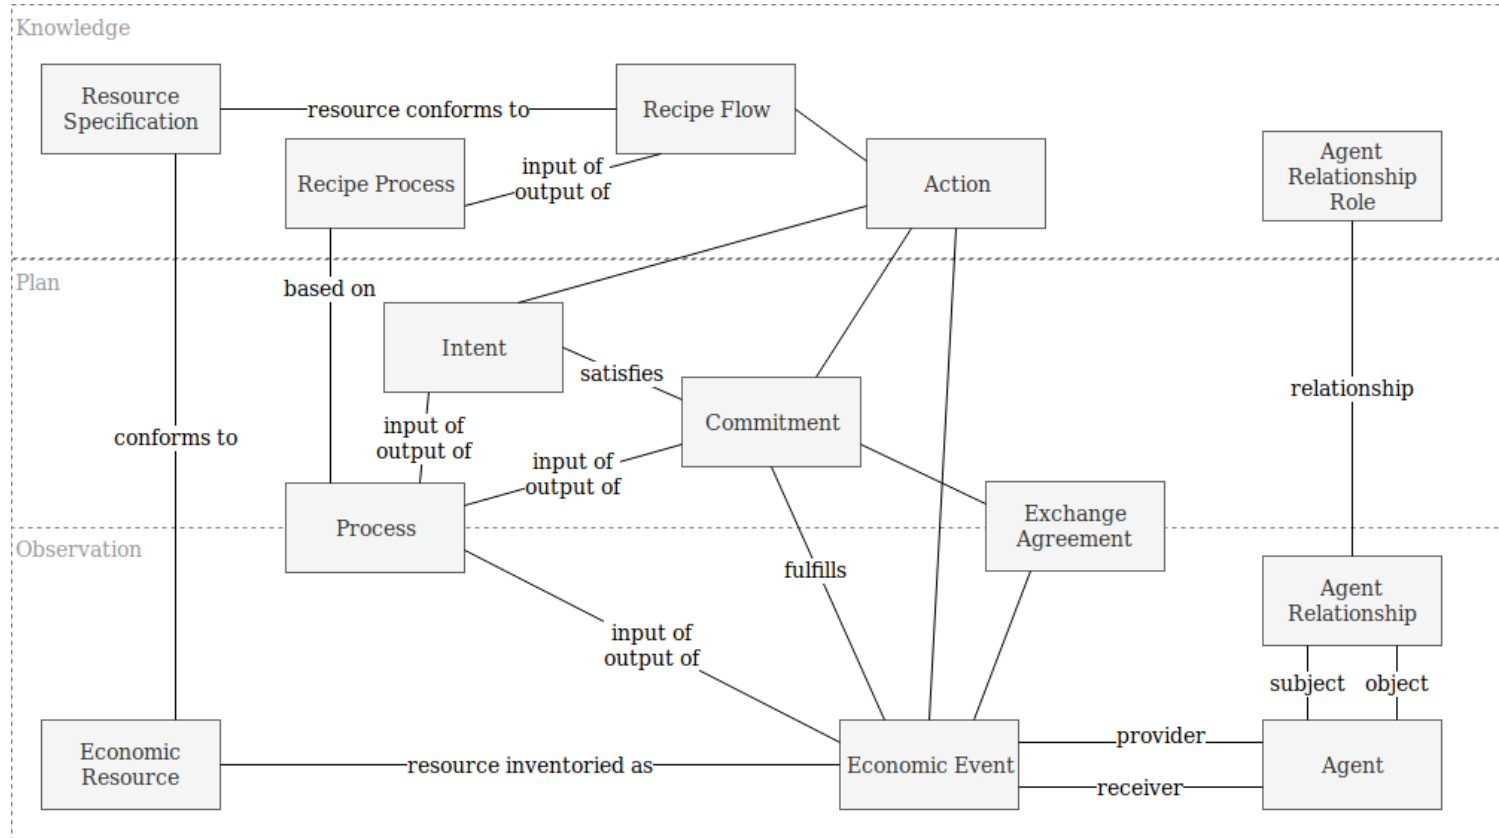

# Processes and Exchanges may be planned by means of Commitments.

# Commitments are plans for Economic Events that have not happened yet.

All of the lines connecting the Knowledge concepts to each other, and to the Plan and Observation concepts, also require mutual accessibility.

Value Flows - forward and backward

Product

Collaboration

Reputation

Income

These flows can connect everywhere, in any open app

The end
